EMSA Newsflash - Zurich June 2020 - www.motorsystems.org

Dear,

Welcome to the latest Newsflash of the 4E Electric Motor Systems Annex ([EMSA](#)).

News

Survey invitation: Digital technologies for energy efficiency

Digitalisation will help companies to save energy, but how?

EMSA invites you to take part in an international survey on the status of digitalisation in your company and in motor driven systems. The target is to identify interesting use cases and advantages, but also potential barriers and suggestions for policy intervention. We invite you to fill in the survey by **14 July**. In turn, you will have access to the summary report in autumn 2020.

Topmotors Webinar: «New global motor standards move the market» is now available online

On 10 June, Conrad U. Brunner held a presentation during the Topmotors webinar «New global motor standards move the market» and informed on how new technologies influence markets, standards and regulation. He also reported about the new project «[Coordination and Alignment of IEC and ISO Standards for Energy Efficient Electric Motor Driven Systems](#)».

Conrad U. Brunner has been working in the IEC TC2 (Rotating machinery) for many years and received the «IEC 1906 Award» for «10 years of outstanding work» within this field.

EMSA is the Electric Motor Systems Annex of the International Energy Agency's Technology Collaboration Programme on Energy Efficient End-use Equipment 4E. Currently Australia, Austria, Denmark, European Commission, Netherlands, Sweden, USA and Switzerland participate actively in EMSA. Canada, China, France, Japan, Korea, New Zealand and the United Kingdom participate in other 4E Annexes.
